

REPORT NUMBER 1  
OF THE COSMIC CITIZENS COMMITTEE  
OF NOW CREATIONS

*May 2021*

BY VINCE LISI

## **Report Number 1 of the Cosmic Citizens Committee of Now Creations, Inc.**

The following is the first of regular reports that the Cosmic Citizens Committee (CCC) of Now Creations(NC) will send to those of you on the Now Creations email list.

The purpose of the CCC is twofold:

- (1) To provide information to the NC members, and
- (2) To explore life beyond the planet—the word “cosmos” means “the orderly arrangement of the physical universe.”

These reports are not intended to be the “final word” on cosmic life, but they are meant to give you some practical information about the Larger Universe in which our planet is located. As always, allow your Inner Wisdom to choose as to what is appropriate for you.

Inasmuch as these reports will be regular, I suggest that you download them into a specific CCC folder. I think that you will enjoy the information, and I trust that it will enable you to be more “universal” in how you view life.

Please contact me personally if you have any questions or concerns.

Namaste,  
Vince

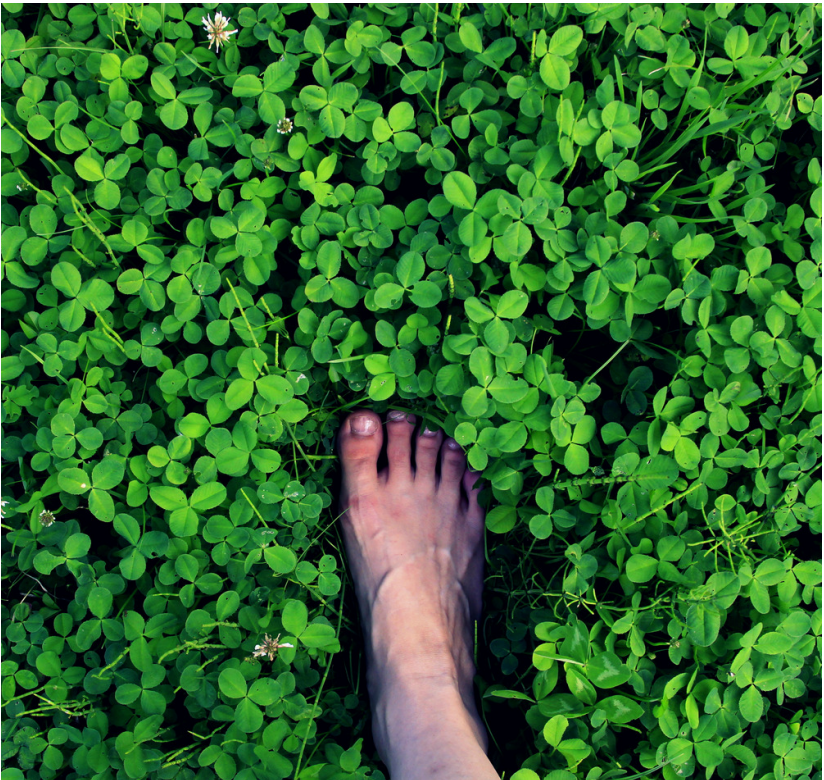

Before considering life beyond the planet, it would be better to consider your life here on earth.

The following ideas might promote some thoughts about your life.

1. You live in two realms of reality based on the two parts of you.

2. The first realm of your reality is the Realm of Physical Matter, the material universe. You live in a physical world that has two major physical factors: (1) your physical body, and (2) the material world.

3. The second realm of your reality is the Celestial Realm of non-physical experience. Your non-physical “experiences” in the Celestial Realm consist of your emotions, thoughts, and soul awareness (consciousness). This realm includes the astral and causal planes, and much more.

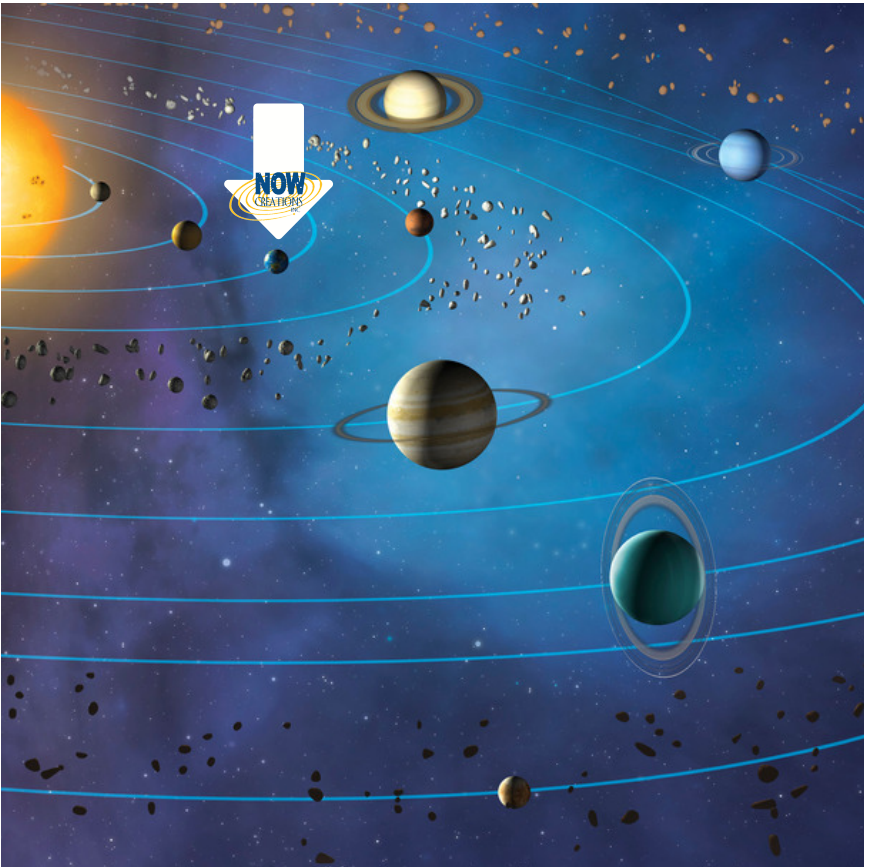

4. Let's now return to you, with your physical body and the material world. The following are important facts to know:

1. You live on a planet. You are a planetary being. The Earth is the planet on which you live.

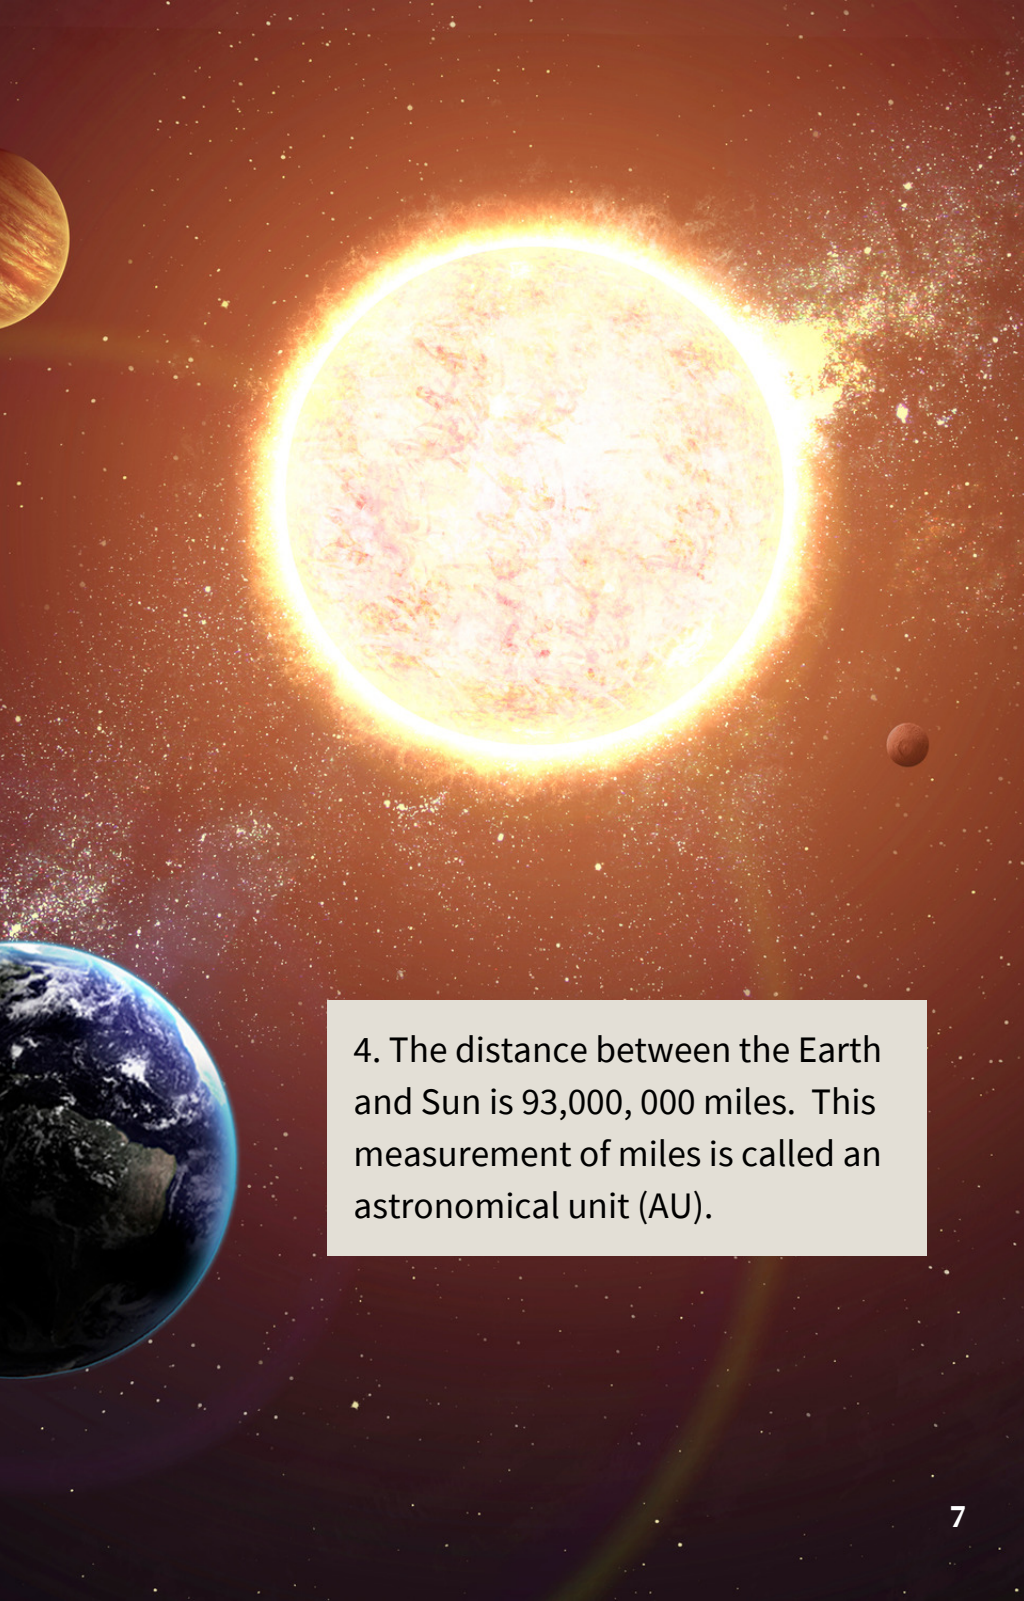

2. Your planet is a part of a star system, as every planet is. Our star system is derived from the Latin word “Solis” and is called the “Sun.”

3. There are nine planets in our Sun star system, ranging from the closest to the Sun to the farthest: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto. (This list is subject to debate among astrophysicists)

4. The distance between the Earth and Sun is 93,000, 000 miles. This measurement of miles is called an astronomical unit (AU).

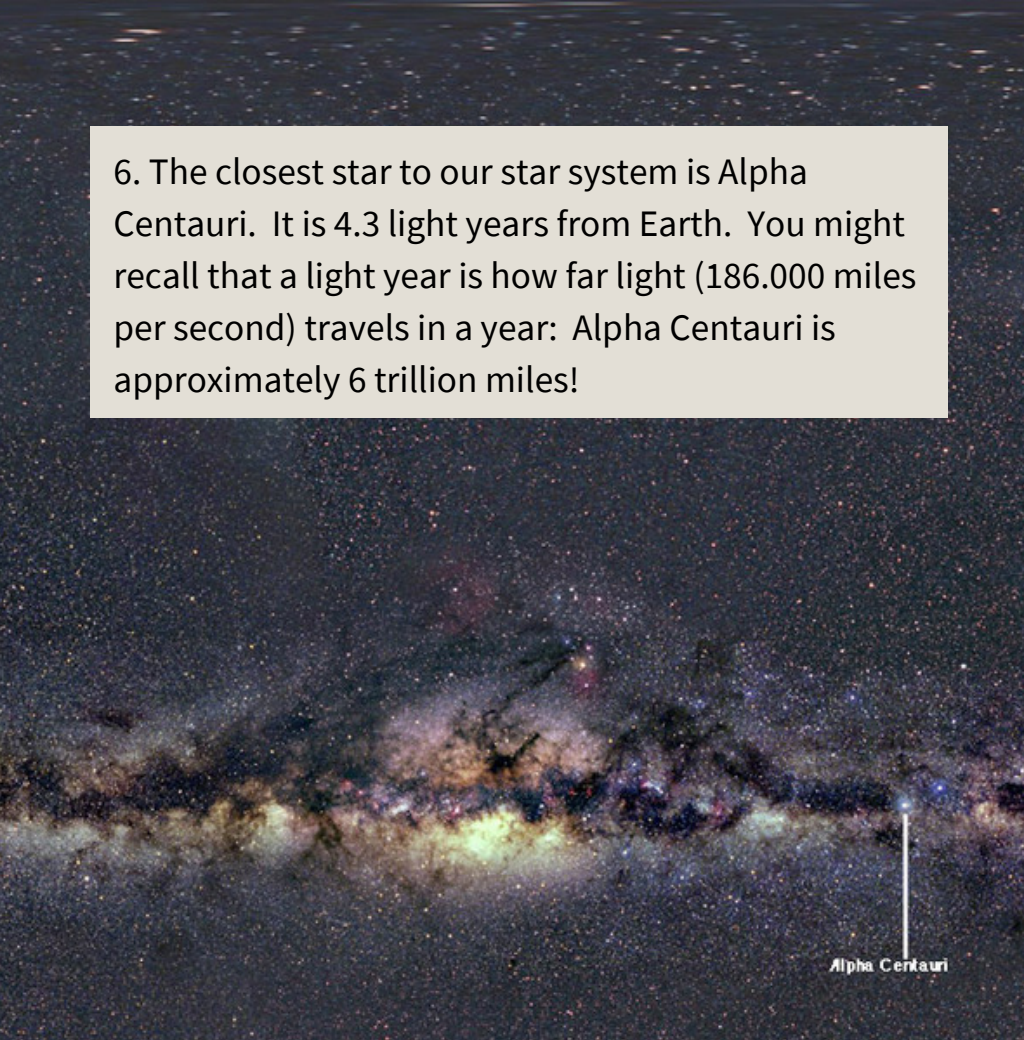

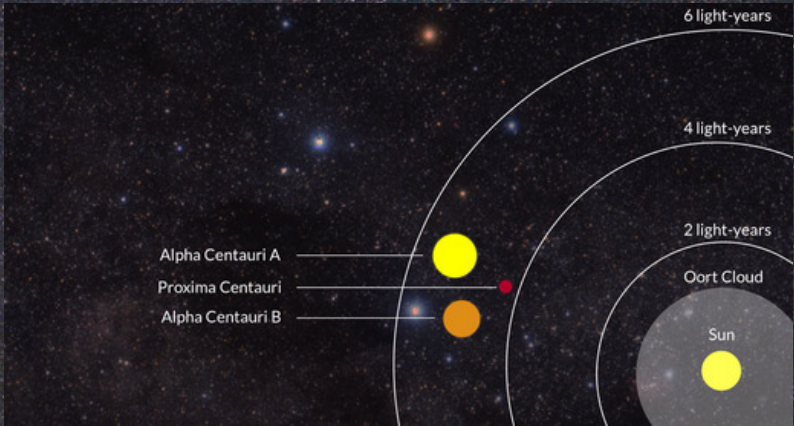

5. Our Star system is part of our Milky Way Galaxy. There are innumerable galaxies beyond our own.

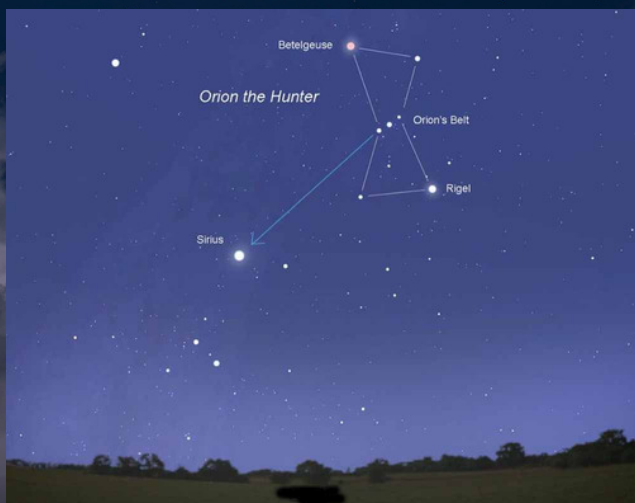

6. The closest star to our star system is Alpha Centauri. It is 4.3 light years from Earth. You might recall that a light year is how far light (186,000 miles per second) travels in a year: Alpha Centauri is approximately 6 trillion miles!

Alpha Centauri

7. Sirius, the brightest star in the night sky, is 8.58 light years from the earth.

There will be more to come in our next quarterly report. For now, remember that you are an Infinite Being of Light and Love!

Namaste,  
Vince
